

TAP3: A Case Study

Tailored Assessment of Printed Production Parts

Tailored Label Products, Inc. is not just a label supplier, but a partner in design and production. From engineering a complete label or adhesive solution to performing on location LEAN assessments, TLP works with each customer to create a successful manufacturing environment.

ENGINEERED LABEL &
ADHESIVE SOLUTIONS

Watching paint dry generates substantial savings...

Tasked with a unique challenge, a global parts manufacturer turned to TLP to help win business for a new fuel filtration system. Not only did their customer want a logo on the filtration system, they also wanted a removable paint mask added over the label to simplify their painting process. TLP created a winning construction and helped the customer:

- Improve production efficiency by producing the label and mask together.
- Decrease application time by 50%.
- Reduce costs by 9%.
- Eliminate an additional SKU to manage.
- Reduce waste and inventory by combining parts.

TAP3

1. Pre-assessment data gathering
2. Plant level assessment
3. Performance requirements/ specification organization/ lean assessment/ etc.
4. Cost reduction project identification
5. Formalized cost savings report
6. Implementation

*Cost reduction and
process efficiency
with TLP.*

Personal commitment. Powerful results.

Authorized Dealer

TAP3 - Tailored Assessment of Production Printed Parts

1. Pre-assessment data gathering
2. Plant level assessment
3. Data entry / Specification organization
ie. – samples, engineering prints, performance requirements
4. Cost reduction project identification
5. Formalized cost savings report
6. Implementation
